

CAT[®] UNDERCARRIAGE

GET ON THE RIGHT TRACK

NOW AT A LOWER PRICE

For over a century, Caterpillar has led the way in undercarriage innovation—driven by one goal: helping customers get the best return on their investment. With a full range of track systems tailored to every terrain and application, we deliver maximum performance at the lowest cost-per-hour.

The undercarriage is one of the most critical components of your machine's performance, durability, and operating cost. Every bolt, pin, and track is designed to keep you moving efficiently and with confidence, even in the toughest conditions.

TRACK LINKS

Track links have high core hardness, helping to hold the track section together.

PIN

Cross-drilled pins provide an oil passage between the pin and the bushing.

OIL RESERVOIRS

Carefully machined oil reservoirs ensure proper oil distribution.

STEPPED BUSHING

Stepped bushings, which are thicker in the middle, provide more external wear material.

RIGID SEAL

Rigid seal provides better sealability, reducing the effect of impact on track joints.

GENUINE PARTS, GENUINE SAVINGS.
