ELPHINSTONE

UNDERGROUND RELIABILITY

UG20M UNDERGROUND MOTOR GRADER

FOR IMPROVED PRODUCTIVITY AND RELIABILITY UNDERGROUND.

Machine Safety

With safety as a priority, the UG20M is engineered with features to help protect the operator and others on the job site. The Roll Over Protection System (ROPS) and Falling Object Protection System (FOPS) cabin provides a quiet environment with low vibration levels, reducing operator fatigue so the operator remains efficient and productive all day. An interlocking configuration prevents park brake from releasing if the door is open or the seat-belt is unfastened. Activation of emergency stop switches by the operator or bystander will immediately stop the engine and apply the park/emergency brake.

Maintenance and Serviceability

Easy access to service areas speeds up maintenance and ensures that routine service is performed on time. Ecology drains shorten service times and help prevent spills. Radiator cleanout access gives the operator the ability to clear away debris and other materials that build up around the radiator.

Machine Application

The Elphinstone UG20M Grader can significantly increase the productivity of the production fleet and reduce operational costs by maintaining haul roads. The circle is securely attached to the drawbar by four support shoes. The moldboard has optimal curvature and large throat clearance that helps move all soil types quickly and efficiently. These features ensure excellent load distribution and minimal material build-up in the circle area while allowing large blade loads to roll freely. The UG20M can be optioned with many additional features to suit each application.

STRUCTURES DRAWBAR-CIRCLE-MOLDBOARD

HEAVY DUTY DURABILITY AND PRECISE CONTROL.

Frame provides consistency and strength

The front frame, drawbar and one-piece forged steel circle are designed for durability in heavy applications. The flanged box-section design removes welds from high stress areas, improving reliability and durability. The rear frame structure has two box section channels with a fully-welded differential case for a solid working platform. An integrated bumper reinforces the rear frame to handle high stress loads.

Drawbar, circle and moldboard

The M Series drawbar is designed for high strength and optimum durability.

The circle resists high stress loads. Raised surfaces prevent circle teeth wear against the drawbar.

The circle is manufactured from forged steel and the teeth are induction hardened to resist wear. The circle is securely attached to the drawbar by four support shoes.

The moldboard has optimal curvature and large throat clearance that helps move all soil types quickly and efficiently.

These features ensure excellent load distribution and minimal material build-up in the circle area while allowing large blade loads to roll freely.

Heat-treated rails, hardened ground engaging tools and heavy duty bolts ensure maximum service life and reliability.

Moldboard float

Floating only one cylinder permits one end of the moldboard to follow a hard surface while the operator controls the cross-slope with the other cylinder.

Moldboard

The standard moldboard length is 12' (3700mm). This may be reduced to 10' (3100mm) for underground applications.

IMPROVED VERSATILITY AND PERFORMANCE.

Front mounted groups

A front mounted push plate/counterweight is standard equipment.

Front and rear tow points

Both front and rear tow points are painted red and are provided as standard equipment.

Ground engaging tools

A wide variety of cutting edges and end bits are available, all designed for maximum service life and productivity.

Rear ripper (dealer fit option only)

The M Series optional ripper is designed to quickly penetrate and break-up tough material so it can be easily pushed aside by a subsequent pass of the moldboard. The ripper beam is supplied with three shanks, with provision to add two more if needed.

Please note: The ripper is a dealer-supplied option only.

OPERATOR ENVIRONMENT

ERGONOMICALLY DESIGNED FOR ALL-DAY COMFORT.

Designed for productivity

M Series cabs are designed to keep the operator comfortable, relaxed and productive. Features like two electro-hydraulic control joysticks replace the conventional steering and lever controls. Located either side of the operators seat, the joysticks can be positioned for optimal operator comfort and reduced fatigue.

Productivity and safety are enhanced by the operator's clear view of the moldboard and tandem tyres.

Working in the dark is easier with backlit transmission shifter and rocker switches.

In-dash instrument cluster

The instrument panel, with easy-to-read, high-visibility gauges and warning lamps, places vital machine information and diagnostic capability easily within the operator's view.

The dash includes gauges for engine coolant temperature, articulation, voltage and fuel level. Hour meter, speedometer and tachometer are standard. All major systems are monitored by warning lights. Both doors are fitted with interlocks and seat belt alarms are visual and audible.

INTUITIVE CONTROL AND UNRIVALLED PRECISION.

Ease of operation

Two electro-hydraulic joysticks require up to 78% less hand and wrist movement than conventional lever controls for greatly enhanced operator comfort and efficiency. The intuitive control pattern allows both new and experienced operators to quickly become productive.

Ergonomically positioned joysticks for optimal comfort, visibility and proper operation.

Joystick functions

- » The left joystick primarily controls the machine direction and speed including steering, articulation, return-to-center, wheel lean, gear selection, left moldboard lift cylinder and float.
- » The right joystick primarily controls the drawbar, circle and moldboard functions including right moldboard lift cylinder and float, moldboard slide and tip, circle turn, drawbar center shift, electronic throttle control and manual differential lock/unlock.

Intuitive steering control

Joystick lean angle mirrors the steer tires' turning angle. A brake tensioning system holds the joystick in position until the operator moves it. The steering control automatically reduces steering sensitivity at higher ground speeds for comfortable and predictable control.

Electronic throttle control

Provides easy, precise and consistent throttle operation. An automatic/manual mode switch offers flexibility for different applications and operator preferences.

Articulation return-to-center

Automatically returns the machine to a straight frame position from any angle with the touch of a button.

SAFETY FEATURES

MACHINE SAFETY IS OUR FIRST PRIORITY.

ROPS/FOPS Cab

The Roll Over Protection System (ROPS) and Falling Object Protection System (FOPS) cabin provides a quiet environment with low vibration levels, reducing operator fatigue so the operator remains efficient and productive all day.

Lights, camera, action!

Dark becomes light with well-located LED lights providing a safer work environment by minimising intense shadows. The reversing camera [optional] provides the operator with a wide-angle view of the area behind the grader, increasing awareness of surroundings. A multi-view camera is also available as an option.

Lockable battery and starter motor isolation switches

These isolation switches are provided for the use of the operator and/or maintenance personnel to prevent inadvertent machine starts or battery discharge.

Emergency stop switches

Activation of any of these switches by the operator or a bystander will immediately stop the engine and apply the park/emergency brake.

Brake systems and machine protection

Brakes located at each tandem wheel offer the largest total brake surface area in the industry, delivering dependable stopping power and longer brake life.

Door and seat belt interlock

An interlocking configuration prevents park brake from releasing if the door is open or the seat-belt is unfastened.

Additional standard safety features

Laminated glass windows and lockable doors, brake lights, conveniently located grab rails, reversing lights and alarm also help ensure a safe work environment.

SERVICEABILITY EQUALS INCREASED PRODUCTIVITY.

Easy maintenance for more uptime

Easy access to service areas speeds up maintenance and ensures that routine service is performed on time. Ecology drains shorten service times and help prevent spills. Radiator cleanout access gives the operator the ability to clear away debris and other materials that build up around the radiator.

Extended service intervals

- » 500 hour engine oil changes.
- » 4,000 hour hydraulic oil changes.
- » 12,000 hour engine coolant changes.

Diagnostics and machine monitoring

The dash cluster panel provides enhanced machine information and diagnostic capability, which allows faster servicing of the transmission and engine.

O-Ring face seals

O-Ring face seals create a reliable connection and are used in hydraulic circuits to minimise the possibility of oil leaks.

Separate wiring harnesses

Modular harness design provides simple disconnects for major machine repairs or rebuilds which reduces machine downtime.

Cat electronic technician (Cat ET)

Cat Electronic Technician is a two-way communication tool that gives service technicians easy access to stored diagnostic data, reducing machine downtime and lowering operating costs.

Circle Saver™ (Cat option)

Keeping your system lubricated daily is important and the optional Circle Saver makes it easy to do. The easy-to-access grease kit allows you to keep the circle drive pinion greased at all times. Circle Saver™ features a remote fitting and grease line that runs from the drawbar to the pinion housing, making it easier to grease the pinion from the top of the drawbar instead of underneath the circle.

FEATURE OVERVIEW

DESIGNED FOR STRENGTH, DURABILITY AND INCREASED PRODUCTIVITY.

● Standard ● Optional ● Safety

FRONT COUNTERWEIGHT PUSH BLOCK

Front counterweight/push-block ensures adequate front wheel traction (and hence steering)

● ● WHEEL CHOCKS

2x chocks stored in brackets either side of the front counterweight

REDUCED HEIGHT MOLDBOARD CYLINDERS

SHORTENED GRADER WHEELBASE

Includes shortening the frame and moldboard drawbar

CAB ACCESS LIGHTS

Located on inside of door - illuminates stairs and entry when door is opened

LIVE SPINDLE FRONT AXLE DESIGN

3-PIECE 24 in (610mm) WHEEL RIMS

FRONT RETRIEVAL POINT

Painted red (hidden by tyre)

8x ADDITIONAL LED WORK LIGHTS

Appropriate for underground operation
2x below the cabin facing forward
2x facing rearwards and 4x mounted on the spine facing forwards

STANDARD 12 ft MOLDBOARD

SHORTENED 10 ft MOLDBOARD

FLEXIBLE CAB ACCESS STAIRS

● **ROPS/FOPS ENCLOSED CABIN**

Low profile ROPS/FOPS enclosed cabin with air conditioning and pressurisation. Features joystick controls and easy to read in-dash instrument cluster

●● **1x FLASHING BEACON**

Rotating amber beacon

● **REDUCED HEIGHT EXHAUST OUTLET AND AIR INTAKE**

● **COMPLETE CAT POWERTRAIN**

Proven Cat C7.1 engine with U.S. Tier 4 Interim/ EU Stage IIIB equivalent emission levels, power-shift countershaft transmission, 8 forward and 6 reverse gears for optimal productivity, differential lock and oscillating tandem (chain) drive system

● **REAR RADIATOR PROTECTION FRAME**

●● **REFLECTIVE TAPE**

Reflective tape delineation of the machine profile

●● **REAR VIEW CAMERA**

● **STOP (BRAKE) LIGHTS**

● **REAR INDICATOR LIGHTS**

Rear turning, reversing and front turning indicator lights

●● **EMERGENCY STOP**

Red button accessible from within the operator station

●● **AUTOMATIC FIRE SUPPRESSION SYSTEM**

Dry powder or aqueous film forming foam (AFFF)

● **FABRICATED STEEL FUEL TANKS**

● **AUTOMATIC GREASE LUBRICATION SYSTEM**

●● **EMERGENCY STOP**

Red button accessible from left hand side at ground level
Right hand side is optional ●●

● **REAR RETRIEVAL POINTS**

● **CATERPILLAR REAR-MOUNTED RIPPER ASSEMBLY - DEALER FIT**

ENGINE ARRANGEMENT

MAXIMUM POWER AND EFFICIENCY.

Power management

The Cat C7.1 Tier 4 Interim engine with ACERT™ Technology uses electronic control, precision fuel delivery and refined air management to provide outstanding performance and lower emissions. Certified to U.S. Tier 4 Interim/EU Stage IIIB emissions standards and is CSA certified.

Variable Horse Power (VHP) to provide more power in the higher gears.

The electronic throttle control provides easier, more precise and consistent throttle operation. Engine over-speed protection prevents downshifting until an acceptable safe travel speed has been established.

POWER TRAIN

RELIABLE PERFORMANCE.

Smooth shifting transmission

- » Full Electronic Clutch Pressure Control (ECPC) ensures smooth speed and directional changes.
- » Shift torque management helps to smooth gear changes without the use of the inching pedal, helping the operator to remain focused on the task at hand.
- » Load compensation ensures consistent shift quality regardless of blade or machine load.
- » Autoshift automatically shifts the transmission at optimal points for easier operation.

Oil disc brakes completely sealed, adjustment free

Hydraulically activated, oil-bathed, air-actuated and spring-released service brakes, located at each tandem wheel to eliminate power train braking loads and to reduce service time. The large brake surface area provides dependable braking capability and extended life before rebuild.

Front axle with Cat live spindle design

The Cat sealed spindle keeps bearings free from contaminants and lubricated in a lightweight oil to reduce owning and operating costs. A larger tapered roller bearing is outboard where the load is greater, extending bearing life.

DELIVERING POWER AND CONTROL.

Balanced flow, independent oil supply

Hydraulic flow is proportioned to ensure all implements operate simultaneously. Independent oil supply prevents cross-contamination and provides proper oil cooling, which means less heat build-up and extended component life.

Implement control valves

Provide outstanding operator “feel” and predictable system response for unmatched implement control. To help maintain exact blade settings, lock valves are built into all control valves. Line relief valves are also incorporated into selected control valves to protect the cylinders from over pressurization.

Load-sensing hydraulics

A load sensing variable displacement pump and advanced electro-hydraulic valves provide precise implement control and better machine performance. Continuously matching hydraulic flow and pressure to power demands creates less heat and reduces power consumption.

Consistent and predictable movement

The electro-hydraulic system valves are specifically designed for each hydraulic function on the motor grader. They compensate for differences in flow requirements, based on cylinder size and the difference in surface volume between the rod end and barrel end of the cylinder. The result is predictable, consistent hydraulic control whether extending or retracting the cylinder.

CUSTOMER SUPPORT

WHEN UPTIME REALLY COUNTS.

Renowned cat dealer support

From helping you choose the right machine to financing and ongoing support, your Cat dealer provides the best in sales and service.

- » Manage your costs with preventive maintenance programs like S-O-S fluids analysis, coolant sampling and guaranteed maintenance contracts.
- » Stay productive with best-in-class parts availability.
- » Your Cat dealer can also help you boost efficiency with operator training.
- » When it's time for component replacement, your Cat dealer can help you save even more. Genuine Cat remanufactured parts carry the same warranty and reliability as new products at savings of 40 to 70 percent for powertrain and hydraulic components.

FUTURE SUSTAINABILITY

THINKING INTO THE FUTURE.

Sustainable waste and cost management

- » Integrated machine systems and technologies improve productivity for greater accuracy, lower fuel use and reduced machine wear.
- » Replaceable wear parts save maintenance time and cost, and extend major component life.
- » Ecology drains help make draining fluids more convenient and help prevent spills.
- » Major components are built to be rebuilt, eliminating waste and saving customers money by giving the machine and/or major components a second – and even third life.
- » A variety of safety features help safeguard operators and others on the job site.

MACHINE DIMENSIONS

Turning Radius

Side View and Drive Size

Dimensions

All dimensions are based on 14.0R24 tyres. *Ripper is a dealer fit option

1	Height - Top of Cab Height - Exhaust Stack	2720 mm 2720 mm	8 ft 11 in 8 ft 11 in
2	Height - Front Axle Centre	595 mm	1 ft 11.4 in
3	Length - Between Tandem Axles	1510 mm	4 ft 11.4 in
4	Length - Front Axle to Moldboard	1590 mm	5 ft 2.5 in
5	Length - Front Axle to Mid Tandem	5140 mm	16 ft 10.4 in
6	Length - Front Tyre to Rear of Machine	8125 mm	26 ft 7.9 in

OVER 45 YEARS IN THE MINING INDUSTRY.

Elphinstone Pty Ltd is an established Caterpillar Original Equipment Manufacturer with over 45 years' experience in the mining industry. Elphinstone specialises in the design, manufacture and support of quality equipment for the global underground and surface mining industries.

The Elphinstone range of Underground Mining Support Vehicles combines practical design, the latest technology and quality manufacturing to ensure reliable performance.

The current product range includes specialised underground support vehicles, mine extraction devices, extended distance off-highway haulage trucks and water tanks customised to suit Caterpillar articulated trucks.

As an authorised Caterpillar Original Equipment Manufacturer, all Elphinstone products are sold and supported via the global Cat® dealer network.

UG20M MOTOR GRADER

For more complete information on Elphinstone products, dealer services, and industry solutions, visit www.elphinstone.com or contact your local Cat dealer.
